

WIGGINS MARINA BULL.

SAFETY. CAPACITY. DURABILITY. BUILT FOR BOATS.

WIGGINS
LIFT CO., INC.

OUR UNITS CAN LIFT MORE THAN ANY COMPETITOR WHEN COMPARED MODEL TO MODEL

Ergonomic console with No-Rust materials. On Cover: World's largest Marina forklift handles large popular Express Cruisers and Open Fisherman with ease.

High Capacity with Confidence and Strength

Lifting capacity and stability are the two most important characteristics of a marina truck. Wiggins specializes in long load center forklifts. Our Marina Bull can safely and reliably lift longer and heavier boats than our competition because we design our lifting systems to handle the forces, stresses, and leverage needed for boats with long load centers. The counterweight and chassis designs have higher stability factors and stronger masts and forks. **A Wiggins weighs more because it does more, safely, year after year.**

Our Marina Bull LoPRO has the lowest center of gravity and the heaviest counterweights in the industry, ensuring that you can lift the rated boats at each rack height with the highest confidence. Wiggins Marina Bull means capacity, strength, safety, and durability.

Innovative Engineering and Technology Means Safety

Safety is a critical characteristic of any high capacity lift. Mishaps can cost money, time, and, worst of all, injury. That's why Wiggins forklifts have standard safety features and options that not only save lives but also save money. Rear visibility and turning clearance is dramatically improved with

the shortest length counter-weight in the industry and a standard backup camera. **All this increases customer and employee safety while protecting property from damage.**

We don't stop there. Wiggins' patented StabiLift system monitors and controls the lifting of maximum capacity boats, giving the operator real-time feedback while also maintaining stability by preventing accidental overload. **Wiggins pioneered automatic rear axle stabilizers in 1998, a feature that is standard today on all high lift Marina Bulls.**

Visibility, sensors, cameras, engineered monitoring systems, and overload warning technology ensure that Wiggins MarinaBulls meet the highest possible safety standards.

Save Money and Time with Easy Access and Quick Service

When it comes to servicing a Wiggins Marina Bull, we beat the competition with easy access for maintenance, service, and troubleshooting. The innovative clamshell design of the operator console and engine compartment allows easy access—at eye level—to the entire power train for service when needed. **Easy access means lowered maintenance costs and a quick return to moving boats.**

Our customers love the time and money-savings that a Marina Bull LoPro brings to their operations.

Built for Your Environment and Needs

With the growth of Clean Marina initiatives at both saltwater and freshwater sites, Wiggins offers Quiet and Clean options to help you stand out as good neighbors, while also reducing operating costs. In addition to optional LPG engines that Wiggins has always offered, Wiggins now offers a Tier 4 Final Volvo diesel engine that meets the most stringent environmental standards. Non-mark tires and eco-friendly oil options help meet your environmental challenges.

Wiggins offers its newest Marina Bull with custom engineered options such as shortened high-density counterweights, the lowest carry-height possible with a Wiggins patented 3-stage mast, **the longest life possible with AutoLube and Super Filtration systems, and stronger powertrains designed to climb the steepest ramps.**

We design and manufacture each lift to meet our customers' unique environment and needs. Our goal is to make you better at what you do. This approach makes each Marina Bull particularly suited to the job it will perform, which means better performance and durability.

Wiggins craftsmen take pride in their products. Below: With 3 operator positions available you have choices like the side mount shown.

EASY ACCESS MEANS LOWER MAINTENANCE COSTS AND A QUICK RETURN TO MOVING BOATS.

Left Top: Short wheel base and high capacity maximize marina income. Left Bottom: Save time and money with the Wiggins LoPRO powered tilt console.

With backup and optional forward camera systems, Wiggins helps reduce operating costs.

IN THE MOST CRUCIAL AREAS OF PERFORMANCE AND SAFETY, WE OVERBUILD.

We Are the Best at Customization

Do you have a particular need for your racks or yard? Shortest possible length? Highest possible lift? Deepest possible negative lift? Short doors or eaves or low sprinklers? **You name it, our engineers will design it, and we will manufacture it especially for you—usually with the same delivery times. Wiggins is the best at customization.**

Wiggins Marina Bulls Work Harder and Live Longer

Wiggins products are known for their longevity and durability. To us, “longevity” means fifteen or twenty years, not the four to eight years of other manufacturers. **There are Wiggins lifts still working in the field after forty years!**

We achieve this standard by starting with quality raw materials and the best available components. In the most crucial areas of performance and safety, we overbuild. **Our forks, carriages, masts and axles are the most rugged in the industry.** The use of corrosion resistant materials add

to the durability. Our IQAN System and hydraulic pressures test panel allow monitoring of truck performance and status, allowing the operators and mechanics to stay informed in real time.

We don't stop there. Our optional auto-lube system minimizes downtime by automatically lubricating key components—mast and carriage bearings, steer axles, tilt cylinder, mast pins—to increase component life and ensure smooth operation. Our optional oil purification system reduces costly and time-consuming oil changes. With proper maintenance, the Marina Bull LoPro with optional Super Filtration can operate far longer than other lifts without having to change expensive lubricating and hydraulic oils. This feature alone has proven to extend component life by thousands of hours.

An investment in a Wiggins Marina Bull is an investment for the long haul.
